Product Snapshot

Index+ Notes

Indicative Terms and Conditions – Feb 2, 2007

Sample Structure:

- Index: S&P 500® Index (Bloomberg: SPX <Index>)
- Maturity: March 2, 2009
- Index Participation: 100% upside participation
- Out-Performance Amount: 5.00%
- Call Level: 17.50% (callable any time after February 28, 2008 up to and including the Final Valuation Date)
- Downside Risk: 1-for-1 downside participation + 5.00% Out-Performance

Positioning:

- Equity alternative that facilitates a moderately bullish view on the Index.
- If the notes are not called, at maturity investors will out-perform the performance of the Index by 5.00% on the upside and downside.
- Notes may be called at 17.50% and, therefore, investors may forgo unlimited upside in exchange for the Out-Performance Amount.

Best Case Scenario:

- Investors receive unlimited Index appreciation plus a 5.00% Out-Performance Amount, subject to a Call Level at 17.50%. If called, the return on the notes is equal to 17.50%.

Worst Case Scenario:

- If the Index depreciates below its Initial Level, investors will participate 1-for-1 on the downside, but, at maturity, will receive 5.00% more than the depreciation of the Index. Maximum loss at maturity is equal to 95.00%.

Risk Considerations:

- Because the notes are not principal protected, and the return to investors is based on the performance of the Index, investors may lose up to 95.00% of their initial investment.
- The payment at maturity is linked to the performance of the Index, which may be positive or negative.
- The notes do not pay dividends.
- Because the notes may be called at the Call Level of 17.50%, the return on the notes, if any, may be lower than the return that investors would have received if they had made a direct investment in the Index or the component securities of the Index.
- Credit risk – 100% loss possible in the event of an issuer default.

Investing in alternative investments may not be suitable for all investors and involves special risks, such as risks associated with leveraging the investment, potential adverse market forces, regulatory changes and potential illiquidity. There is no assurance that the investment objectives described herein will be attained.

Hypothetical Scenario Analysis at Maturity:

- The hypothetical scenario analysis contained herein is not reflective of the reinvestment of dividends and other earnings, advisory fees, brokerage or other commissions, and any other expenses that a client would have paid or actually paid. No representation is made that any trading strategy or account will, or is likely to, achieve results similar to those shown. Hypothetical scenarios are neither indicators nor guarantees of future Index performance. Actual results will vary, perhaps materially, from the hypothetical analysis.
